**COMMISSION IMPLEMENTING DECISION**

**of 16.9.2024**

**granting an authorisation under Regulation (EC) No 1907/2006 of the European Parliament and of the Council to Olivari B S.p.A. for a use of chromium trioxide**

(Only the English text is authentic)

## COMMISSION IMPLEMENTING DECISION

of 16.9.2024

**granting an authorisation under Regulation (EC) No 1907/2006 of the European Parliament and of the Council to Olivari B S.p.A. for a use of chromium trioxide**

(Only the English text is authentic)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC<sup>1</sup>, and in particular Article 64(8) thereof,

Whereas:

- (1) Chromium trioxide is listed in Annex XIV to Regulation (EC) No 1907/2006, and uses of that substance are subject to the authorisation requirement in Article 56(1), point (a), of that Regulation.
- (2) On 18 November 2021, Olivari B S.p.A. ('the applicant') submitted an application in accordance with Article 62 of Regulation (EC) No 1907/2006 for authorisation for a use of chromium trioxide. The use for which authorisation was sought is electroplating of brass substrates using chromium trioxide to achieve functional surfaces for architectural fittings.
- (3) The European Chemicals Agency sent the opinions<sup>2</sup> on the application adopted by its Committee for Risk Assessment (RAC) and its Committee for Socio-economic Analysis (SEAC) to the Commission pursuant to Article 64(5), second subparagraph, of Regulation (EC) No 1907/2006. On 14 February 2023, the Commission received the opinions.
- (4) In its opinion, RAC concluded that it is not possible to determine a derived no-effect level for the carcinogenic and mutagenic properties of chromium trioxide in accordance with Section 1.4 of Annex I to Regulation (EC) No 1907/2006 and that therefore chromium trioxide is a substance for which it is not possible to determine a threshold for the purposes of Article 60(3), point (a), of that Regulation. As a result, Article 60(2) of Regulation (EC) No 1907/2006 does not apply to chromium trioxide and an authorisation may therefore only be granted with respect to that substance under paragraph 4 of that Article.

---

<sup>1</sup> OJ L 396, 30.12.2006, p. 1, ELI: <http://data.europa.eu/eli/reg/2006/1907/oj>.

<sup>2</sup> <https://echa.europa.eu/documents/10162/a5ab91ba-2c8d-7ec8-6f70-9bd000e9efd2>

- (5) In its opinion, RAC concluded that the risk management measures and operational conditions described in the application are appropriate and effective in limiting the risk to human health posed by the use of chromium trioxide described in the application.
- (6) However, RAC expressed moderate concerns regarding potential exposure during the manual tasks related to bath sampling and bath concentration adjustment as well as regarding the lack of separation of the electroplating line from the physical vapour deposition line. Consequently, in order to further minimise the exposure of workers to hexavalent chromium (Cr(VI)), the toxic component of chromium trioxide, RAC recommended imposing additional conditions for authorisation. Moreover, in order to address moderate shortcomings in exposure and emissions estimates and to provide information on the trends in exposure and emissions during the authorisation period, RAC recommended imposing additional monitoring arrangements for both occupational exposure to and environmental release of Cr(VI). Having evaluated RAC's assessment, the Commission agrees with its conclusion and recommendations.
- (7) In its opinion, SEAC concluded that the societal costs of not granting an authorisation are higher than the monetised risk to human health arising from the use of chromium trioxide. The Commission, having evaluated SEAC's assessment, concurs with that conclusion and considers that the applicant has demonstrated that the benefits of the continued use outweigh the risk to human health arising from that use.
- (8) For an alternative to be suitable it needs to be safer, available, and technically and economically feasible. Where suitable alternatives are available in the Union, but not technically or economically feasible for the applicant or its downstream users, the applicant is required by Article 62(4), point (f), of Regulation (EC) No 1907/2006 to submit a substitution plan.
- (9) An alternative that provides the functionality and level of technical performance necessary for the use for which authorisation is sought should be considered to be technically feasible. Certain potential alternatives may provide the functionality, but at some loss of performance or in a manner that involves technical compromises that would impair the functionality. In such cases, unless justified by particular circumstances, the Commission should not consider a potential alternative to be technically feasible for the applicant where the applicant has demonstrated that it or its downstream users are not able to accommodate such losses of performance or technical compromises by applying a reasonable additional effort, taking into account the circumstances of the case.
- (10) In its opinion, SEAC concluded that there were no technically feasible alternative substances or technologies available for the applicant but that there were technically or economically feasible alternatives in the Union at the time of adoption of the opinion. The Commission, having evaluated SEAC's assessment and the relevant information available, notes that alternatives providing the overall functionality needed for the use for which authorisation is sought are commercially available in the Union in different market segments. Moreover, the Commission notes that the applicant had already used an alternative process for some of its products but had to cease production due to issues with lower product quality and process reliability, also affecting the economic feasibility of this alternative. Therefore, the Commission recognises that those alternatives imply a loss of performance in terms of functional requirements, in particular corrosion resistance, as well as of decorative nature, and that the applicant has demonstrated that it is not yet able to accommodate such loss of performance and would need more time to develop and implement an alternative. The Commission

therefore agrees with SEAC's conclusion and considers that, although suitable alternatives are available in the Union, they are not yet technically feasible for the applicant.

- (11) In its opinion, SEAC considered that the substitution plan submitted by the applicant is credible and consistent with the analysis of alternatives and the socio-economic analysis. The Commission, having evaluated SEAC's assessment, concurs with that conclusion and considers, taking into account the availability of suitable alternatives in the Union for the use for which an authorisation is sought and the substitution plan, that the applicant has discharged its burden of proof in demonstrating the absence of suitable alternative substances or technologies.
- (12) Therefore, having regard to the conditions laid down in Article 60(4) of Regulation (EC) No 1907/2006, it is appropriate to authorise the use of chromium trioxide described in this Decision, provided that the risk management measures described in the chemical safety report are applied, and that the operational conditions described therein, as well as the conditions set out in this Decision, are fulfilled. However, for legal clarity and in alignment with the information submitted in the application as assessed by SEAC, the use authorised should read 'electroplating of brass substrates using chromium trioxide to achieve functional surfaces for door and window fittings'.
- (13) The Commission has based its assessment on all relevant scientific evidence available, as assessed by RAC and SEAC, and, after having carried out a detailed examination, has concluded on the basis of a sufficient amount of material and reliable information. Nevertheless, additional scientific evidence would allow the Commission to perform its assessment on a more robust or broad evidentiary basis in the future. Hence, it is appropriate to require the authorisation holder to generate and include additional information about exposure and emissions in the review report.
- (14) In its opinion, SEAC recommended that the review period referred to in Article 60(9), point (e), of Regulation (EC) No 1907/2006 be set at 7 years. The Commission agrees with granting a 7-year review period, taking into account the relevant elements from RAC's and SEAC's assessments and, in particular, RAC's conclusion that the risk management measures are appropriate and effective in limiting the risk, as well as SEAC's conclusions on the socio-economic benefits and costs of the continued use of the substance and on the substitution plan.
- (15) The Commission recalls that the aim of the authorisation system is to ensure that substances of very high concern are progressively replaced by suitable alternative substances or technologies where these are available and technically and economically viable. Applicants should therefore make all efforts to achieve a complete phase-out of those substances by the end of a review period.
- (16) The language used to describe the risk management measures and operational conditions in the application for authorisation may be different from the official language of the Member States where the use takes place. Therefore, in order to facilitate supervision and enforcement of compliance with the authorisation, it is appropriate to require the authorisation holder to submit, upon request, a brief summary of those risk management measures and operational conditions to the competent authority of that Member State in an official language of that Member State.
- (17) This Decision does not affect the obligation of the authorisation holder to ensure that a use of a substance does not adversely affect human health or the environment, having

regard to the principle set out in Article 1(3) of Regulation (EC) No 1907/2006. Furthermore, this Decision does not affect the obligation of the authorisation holder under Article 60(10) of that Regulation to ensure that the exposure is reduced to as low a level as is technically and practically possible or the obligation of the employer under Article 4(1) and Article 5 of Directive 2004/37/EC of the European Parliament and of the Council<sup>3</sup> to reduce the use of carcinogens, mutagens or reprotoxic substances at the place of work, in particular by replacing those substances, in so far as is technically possible, and to prevent workers' exposure to a risk to their health or safety. This Decision does not affect the application of Union law in the area of health and safety at work, in particular Council Directives 89/391/EEC<sup>4</sup>, 92/85/EEC<sup>5</sup>, 94/33/EC<sup>6</sup>, 98/24/EC<sup>7</sup> and Directive 2004/37/EC, or any national binding occupational limit values which may be stricter than the applicable limit values under Union law.

- (18) This Decision does not affect any obligation to comply with emission limit values or other requirements set in accordance with Directive 2008/50/EC<sup>8</sup> or Directive 2010/75/EU<sup>9</sup> of the European Parliament and of the Council, nor any obligation to comply with emission limit values set to achieve compliance with the environmental quality standards established by Member States in accordance with Directive 2000/60/EC of the European Parliament and of the Council<sup>10</sup> or the environmental quality standards established in Directive 2008/105/EC of the European Parliament and of the Council<sup>11</sup>. Compliance with the provisions of this Decision does not necessarily imply compliance with any emission limit values or environmental quality

---

standards under any other provisions of Union law, which may include further or more onerous requirements.

- (19) The measures provided for in this Decision are in accordance with the opinion of the Committee established by Article 133 of Regulation (EC) No 1907/2006,

HAS ADOPTED THIS DECISION:

#### *Article 1*

An authorisation is hereby granted in accordance with Article 60(4) of Regulation (EC) No 1907/2006 to the following person for the following use of chromium trioxide (EC No 215-607-8; CAS No 1333-82-0):

Authorisation number	Authorisation holder	Authorised use
REACH/24/40/0	Olivari B S.p.A.	Electroplating of brass substrates using chromium trioxide to achieve functional surfaces for door and window fittings

The authorisation is granted subject to the risk management measures and operational conditions described in the chemical safety report<sup>12</sup>, and to the conditions set out in Article 2.

#### *Article 2*

1. The authorisation is subject to the conditions set out in paragraphs 2, 3 and 4.
2. By 16 September 2025 and afterwards each time when new relevant information becomes available, the authorisation holder shall carry out a study to assess the feasibility of implementing the following measures:
  - (a) the substitution of solid chromium trioxide flakes with liquid chromium trioxide solutions;
  - (b) the implementation of an automated system to perform the bath adjustment and the implementation of a closed or automatic system to perform bath sampling tasks, where exposure to hexavalent chromium (Cr(VI)), the toxic component of chromium trioxide, is expected;
  - (c) the implementation of physical separation of the physical vapour deposition line from the electroplating line.The authorisation holder shall act in accordance with the outcome of that study.
3. The authorisation holder shall ensure that workers use respiratory protective equipment in accordance with standard procedures for use and maintenance. The authorisation holder shall ensure that workers:
  - (a) are provided with adequate respiratory equipment, which is subjected to a fit test prior to its first use;
  - (b) always perform a fit check of the seal of their respiratory protective equipment before starting a relevant task;

---

<sup>12</sup> <https://ec.europa.eu/docsroom/documents/53594>

- (c) are adequately supported to undergo the fit test referred to in point (a) and trained to undertake the fit checks referred to in point (b).
4. The authorisation holder shall document and maintain the information on the outcome and conclusions of the feasibility study and any measure taken in accordance with paragraphs 2 and 3, and shall make that information available, upon request, to the competent authority of the Member State where the authorised use take place.

### *Article 3*

The review period shall expire on 18 November 2028.

The authorisation shall cease to be valid on 18 November 2028 if the authorisation holder has not submitted the review report in accordance with Article 61(1) of Regulation (EC) No 1907/2006 by 18 May 2027.

### *Article 4*

1. The monitoring arrangements set out in paragraphs 2 to 7 shall apply.
2. The authorisation holder shall carry out a monitoring programme measuring occupational exposure to Cr(VI). The programme shall include measurements which shall:
  - (a) take place at least annually, or more frequently if a significant increase of chromium trioxide consumption takes place on site, and shall be sufficiently frequent to capture any potential increase in exposure of workers to Cr(VI);
  - (b) be based on relevant standard methodologies or protocols;
  - (c) ensure a sufficiently low limit of quantification;
  - (d) comprise personal or static inhalation exposure sampling;
  - (e) be representative of all the tasks with possible exposure to Cr(VI), including maintenance tasks, the operational conditions and risk management measures for each of those tasks, and of the total number of workers that are potentially exposed;
  - (f) be recorded so as to include contextual information about the tasks during exposure sampling.
3. The authorisation holder shall conduct a biomonitoring programme for workers potentially exposed to Cr(VI).
4. The authorisation holder shall carry out a monitoring programme measuring the environmental releases of Cr(VI) to the air and wastewater. The programme shall include measurements which shall:
  - (a) take place at least annually, or more frequently if a significant increase of chromium trioxide consumption takes place on site, and shall be sufficiently frequent to capture any potential increase in emission of Cr(VI);
  - (b) be based on relevant standard methodologies and protocols;
  - (c) ensure a sufficiently low limit of quantification;
  - (d) be representative of the operational conditions and risk management measures used at the site where the authorised use takes place;

- (e) be recorded so as to include contextual information associated with each of the measurements.
5. The authorisation holder shall use the information gathered by way of the measurements referred to in paragraphs 2, 3 and 4 to review, at least annually, the appropriateness and effectiveness of the risk management measures and operational conditions in place. While doing so, the authorisation holder shall also review and, if needed, update its assessment of the combined exposure for the different groups of workers and its assessment of the exposure of the general population via the environment. If needed, based on the outcome of these reviews, the authorisation holder shall introduce measures to further reduce to a level as low as technically and practically possible occupational exposure to Cr(VI) and Cr(VI) emissions to the environment. Measures introduced to reduce occupational exposure shall follow the hierarchy of control principles set out in Article 5 of Directive 2004/37/EC.
  6. The authorisation holder shall document and maintain the information from the monitoring programmes referred to in paragraphs 2, 3 and 4, including the contextual information associated with each set of measurements, as well as the outcome and conclusions of the reviews and any measure taken in accordance with paragraph 5. The authorisation holder shall make that information available, including pseudonymised or aggregated biomonitoring results, upon request, to the competent authority of the Member State where the authorised use takes place.
  7. The authorisation holder shall document the steps taken to substitute chromium trioxide in accordance with the substitution plan, including information on the efforts to convince the authorisation holder's customers to accept alternative Cr(VI)-free solutions and justification in case its customers do not accept alternative Cr(VI)-free solutions. Any deviations from the initial substitution plan and information on contingency measures taken shall also be documented. The authorisation holder shall make such documentation available, upon request, to the competent authority of the Member State where the authorised use take place.

#### *Article 5*

If a review report is submitted, it shall include the following:

- (a) the information referred to in Article 2(4) and Article 4(6) and (7);
- (b) a detailed justification as to why a complete phase-out of chromium trioxide is not expected to be achieved by the end of the review period;
- (c) figures detailing the reduction of the quantity of chromium trioxide used in the authorised use, as part of the substitution plan to be submitted in accordance with Article 61(1) of Regulation (EC) No 1907/2006.

#### *Article 6*

Upon request, the authorisation holder shall submit a brief summary of the applicable risk management measures and operational conditions described in the chemical safety report to the competent authority of the Member State where the authorised uses take place. The brief summary shall be drafted in an official language of that Member State.

*Article 7*
