

Brussels, 16.9.2024  
C(2024) 6359 final

**COMMISSION IMPLEMENTING DECISION**

**of 16.9.2024**

**granting an authorisation under Regulation (EC) No 1907/2006 of the European  
Parliament and of the Council to Hazet Werk Hermann Zerver GmbH & Co. KG for a  
use of chromium trioxide**

(Only the English text is authentic)

## COMMISSION IMPLEMENTING DECISION

of 16.9.2024

**granting an authorisation under Regulation (EC) No 1907/2006 of the European Parliament and of the Council to Hazet Werk Hermann Zerver GmbH & Co. KG for a use of chromium trioxide**

(Only the English text is authentic)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/EEC, 93/67/EEC, 93/105/EC and 2000/21/EC<sup>1</sup>, and in particular Article 64(8) thereof,

Whereas:

- (1) Chromium trioxide is listed in Annex XIV to Regulation (EC) No 1907/2006, and uses of that substance are subject to the authorisation requirement in Article 56(1), point (a), of that Regulation.
- (2) On 10 February 2022, Hazet Werk Hermann Zerver GmbH & Co. KG. ('the applicant') submitted an application in accordance with Article 62 of Regulation (EC) No 1907/2006 for authorisation for a use of chromium trioxide. The use for which authorisation was sought is functional chrome plating of hand tools to achieve a high level of abrasion resistance as well as corrosion and chemical resistance.
- (3) The European Chemicals Agency sent the opinions<sup>2</sup> on the application adopted by its Committee for Risk Assessment (RAC) and its Committee for Socio-economic Analysis (SEAC) to the Commission pursuant to Article 64(5), second subparagraph, of Regulation (EC) No 1907/2006. On 25 May 2023, the Commission received the opinions.
- (4) In its opinion, RAC concluded that it is not possible to determine a derived no-effect level for the carcinogenic and mutagenic properties of chromium trioxide in accordance with Section 1.4 of Annex I to Regulation (EC) No 1907/2006 and that therefore chromium trioxide is a substance for which it is not possible to determine a threshold for the purposes of Article 60(3), point (a), of that Regulation. As a result, Article 60(2) of Regulation (EC) No 1907/2006 does not apply to chromium trioxide and an authorisation may therefore only be granted with respect to that substance under paragraph 4 of that Article.

---

<sup>1</sup> OJ L 396, 30.12.2006, p. 1, ELI: <http://data.europa.eu/eli/reg/2006/1907/oj>.

<sup>2</sup> <https://echa.europa.eu/documents/10162/7f5812a0-1c1b-c533-5989-c5a158e6adff>

- (5) In its opinion, RAC concluded that the risk management measures and operational conditions described in the application are appropriate and effective in limiting the risk to human health posed by the use of chromium trioxide described in the application. However, RAC expressed moderate concerns regarding the lack of physical segregation between the tasks with direct exposure to chromium trioxide and other tasks that, only due to their physical proximity to the emission source, have an increased potential for indirect exposure. Moreover, RAC noted that respiratory protective equipment is not used in all tasks with increased potential for exposure to chromium trioxide and that the applicant did not confirm whether fit testing and checks of the respiratory protective equipment are carried out before such tasks are performed. Consequently, RAC recommended imposing additional conditions for authorisation. Moreover, RAC recommended imposing monitoring arrangements with the aim of addressing certain shortcomings in exposure estimates and to provide information on the trends in exposure and emissions during the authorisation period, for both occupational exposure to and environmental release of hexavalent chromium (Cr(VI)), the toxic component of chromium trioxide.
- (6) Having evaluated RAC's assessment, the Commission agrees with its conclusions and recommendations. Nevertheless, the Commission notes that the estimated excess cancer risk value for workers is higher than as regards other comparable applications for authorisation for the use of Cr(VI) substances. Although the Commission acknowledges that this value is a conservative estimate of the most likely excess risk values taken for the purpose of carrying out a risk-benefit analysis, it considers it appropriate to set out the measures concerning occupational exposure, recommended by RAC as monitoring arrangements, as a condition for authorisation.
- (7) In its opinion, SEAC concluded that the societal costs of not granting an authorisation are higher than the monetised risk to human health arising from the use of chromium trioxide. The Commission, having evaluated SEAC's assessment, concurs with that conclusion and considers that the applicant has demonstrated that the benefits of the use outweigh the risk to human health arising from that use.
- (8) For an alternative to be suitable it needs to be safer, available, and technically and economically feasible. Where suitable alternatives are available in the Union, but not technically or economically feasible for the applicant or its downstream users, the applicant is required by Article 62(4), point (f), of Regulation (EC) No 1907/2006 to submit a substitution plan.
- (9) An alternative that provides the functionality and level of technical performance necessary for the use for which authorisation is sought should be considered to be technically feasible. Certain potential alternatives may provide the functionality, but at some loss of performance or in a manner that involves technical compromises that would impair the functionality. In such cases, unless justified by particular circumstances, the Commission should not consider a potential alternative to be technically feasible for the applicant where the applicant has demonstrated that it or its downstream users are not able to accommodate such losses of performance or technical compromises by applying a reasonable additional effort, taking into account the circumstances of the case.
- (10) In its opinion, SEAC concluded that there were no technically and economically feasible alternative substances or technologies available for the applicant and in the Union at the time of adoption of the opinions. The Commission, having evaluated SEAC's assessment and the relevant information available, notes that the identified

alternatives imply a significant loss of performance in terms of technical requirements such as corrosion resistance and abrasion resistance. In this regard, the Commission acknowledges that more studies are needed to identify and optimise one of the most promising alternatives and considers that the applicant has demonstrated that it is not yet able to accommodate such loss of performance and would need more time to develop and implement an alternative. The Commission therefore agrees with SEAC's conclusion that there are no suitable alternatives for the applicant and in the Union.

- (11) Therefore, having regard to the conditions laid down in Article 60(4) of Regulation (EC) No 1907/2006, it is appropriate to authorise the use of chromium trioxide described in this Decision provided that the risk management measures described in the chemical safety report are applied and that the operational conditions described therein, as well as the conditions set out in this Decision, are fulfilled. Nevertheless, for the sake of aligning the use description with the information included in the analysis of alternatives as assessed by SEAC, the use description should read 'functional chrome plating to achieve a high level of abrasion resistance as well as corrosion and chemical resistance of hand tools requiring a metal substrate'.
- (12) The Commission has based its assessment on all relevant scientific evidence available, as assessed by RAC and SEAC, and, after having carried out a detailed examination, has concluded on the basis of a sufficient amount of material and reliable information. Nevertheless, additional scientific evidence would allow the Commission to perform its assessment on a more robust or broad evidentiary basis in the future. Hence, it is appropriate to require the authorisation holder to generate and include additional information about exposure and emissions in the review report.
- (13) In its opinion SEAC recommended that the review period referred to in Article 60(9), point (e), of Regulation (EC) No 1907/2006 be set at 12 years. The Commission agrees with that recommendation, considering the relevant elements from RAC's and SEAC's assessments and, in particular, RAC's conclusion that the risk management measures and operational conditions are appropriate and effective in limiting the risk, SEAC's conclusion on the risk to human health and on the socio-economic benefits of the continued use of the substance, as well as the time needed for research and development, and the implementation of an alternative.
- (14) The language used to describe the risk management measures and operational conditions in the application for authorisation may be different from the official language of the Member State where the use takes place. Therefore, in order to facilitate supervision and enforcement of compliance with the authorisation, it is appropriate to require the authorisation holder to submit, upon request, a brief summary of those risk management measures and operational conditions to the competent authority of that Member State in an official language of that Member State.
- (15) This Decision does not affect the obligation of the authorisation holder to ensure that the use of a substance does not adversely affect human health or the environment, having regard to the principle set out in Article 1(3) of Regulation (EC) No 1907/2006. Furthermore, this Decision does not affect the obligation of the authorisation holder under Article 60(10) of that Regulation to ensure that the exposure is reduced to as low a level as is technically and practically possible or the obligation of the employer under Article 4(1) and Article 5 of Directive 2004/37/EC of

the European Parliament and of the Council<sup>3</sup> to reduce the use of carcinogens, mutagens or reprotoxic substances at the place of work, in particular by replacing those substances, in so far as is technically possible, and to prevent workers' exposure to a risk to their health or safety. This Decision does not affect the application of Union law in the area of health and safety at work, in particular Council Directives 89/391/EEC<sup>4</sup>, 92/85/EEC<sup>5</sup>, 94/33/EC<sup>6</sup>, 98/24/EC<sup>7</sup> and Directive 2004/37/EC, or any national binding occupational limit values which may be stricter than the applicable limit values under Union law.

- (16) This Decision does not affect any obligation to comply with emission limit values or other requirements set in accordance with Directive 2008/50/EC<sup>8</sup> or Directive 2010/75/EU<sup>9</sup> of the European Parliament and of the Council, nor any obligation to comply with emission limit values set to achieve compliance with the environmental quality standards established by Member States in accordance with Directive 2000/60/EC of the European Parliament and of the Council<sup>10</sup> or the environmental quality standards established in Directive 2008/105/EC of the European Parliament and of the Council<sup>11</sup>. Compliance with the provisions of this Decision does not necessarily imply compliance with any emission limit values or environmental quality standards under any other provisions of Union law, which may include further or more onerous requirements.
- (17) The measures provided for in this Decision are in accordance with the opinion of the Committee established by Article 133 of Regulation (EC) No 1907/2006,

---

HAS ADOPTED THIS DECISION:

*Article 1*

An authorisation is hereby granted in accordance with Article 60(4) of Regulation (EC) No 1907/2006 to the following person for the following use of chromium trioxide (EC No 215-607-8; CAS No 1333-82-0):

Authorisation number	Authorisation holder	Authorised use
REACH/24/31/0	Hazet Werk Hermann Zerver GmbH & Co. KG	Functional chrome plating to achieve a high level of abrasion resistance as well as corrosion and chemical resistance of hand tools requiring a metal substrate

The authorisation is granted subject to the risk management measures and operational conditions described in the chemical safety report<sup>12</sup> and to the conditions set out in Article 2.

*Article 2*

1. The authorisation is subject to the conditions set out in paragraphs 2 to 7.
2. By 16 September 2025 and afterwards each time when new relevant information becomes available, the authorisation holder shall carry out a study to assess the feasibility of implementing the following measures:
  - (a) the segregation of the loading and unloading areas from the plating area, either by the introduction of a physical barrier or by removing the loading and unloading tasks from the plating area;
  - (b) the implementation of a closed or automated system for sampling to perform bath sampling tasks, where exposure to hexavalent chromium (Cr(VI)), the toxic component of chromium trioxide, is expected.

The authorisation holder shall act in accordance with the outcome of that study.

3. The authorisation holder shall ensure that appropriate respiratory protection equipment is worn during bath sampling as long as the task is not performed with an automated or closed sampling system.
4. The authorisation holder shall ensure that workers:
  - (a) are provided with adequate respiratory equipment, which is subjected to a fit test prior to its first use;
  - (b) always perform a fit check of the seal of their respiratory protective equipment before starting a relevant task;
  - (c) are adequately supported to undergo the fit tests referred to in point (a) and trained to undertake the fit checks referred to in point (b).
5. The authorisation holder shall carry out a monitoring programme measuring occupational exposure to Cr(VI). The programme shall include measurements which shall:

---

<sup>12</sup> <https://ec.europa.eu/docsroom/documents/54717>

- (a) take place at least annually, or more frequently if a significant increase of chromium trioxide consumption takes place on site, and shall be sufficiently frequent to capture any potential increase in exposure of workers to Cr(VI);
  - (b) be based on relevant standard methodologies or protocols;
  - (c) ensure a sufficiently low limit of quantification;
  - (d) comprise personal or static inhalation exposure sampling;
  - (e) be representative of all the tasks with possible exposure to Cr(VI), including maintenance tasks, the operational conditions and risk management measures for each of those tasks, and of the total number of workers that are potentially exposed;
  - (f) be recorded so as to include contextual information about the tasks performed during exposure sampling.
6. The authorisation holder shall use the information gathered by way of the measurements referred to in paragraph 5 to review, at least annually, the appropriateness and effectiveness of the risk management measures and operational conditions in place. While doing so, the authorisation holder shall also review and, if needed, update its assessment of the combined exposure for the different groups of workers. If needed, based on the outcome of this review, the authorisation holder shall introduce measures to further reduce to a level as low as technically and practically possible occupational exposure to Cr(VI). Such measures shall follow the hierarchy of control principles set out in Article 5 of Directive 2004/37/EC.
7. The authorisation holder shall document and maintain the information from the monitoring programme referred to in paragraph 5, including the contextual information associated with each set of measurements, as well as the outcome and conclusions of the reviews and any measure taken in accordance with paragraphs 2 and 6, and shall make that information available, including pseudonymised or aggregated biomonitoring results, upon request, to the competent authority of the Member State where the authorised use takes place.

### *Article 3*

1. The review period shall expire on 31 January 2034.
2. The authorisation shall cease to be valid on 31 January 2034 if the authorisation holder has not submitted the review report in accordance with Article 61(1) of Regulation (EC) No 1907/2006 by 31 July 2032.

### *Article 4*

1. The monitoring arrangements set out in paragraphs 2, 3 and 4 shall apply.
2. The authorisation holder shall carry out a monitoring programme measuring the environmental releases of Cr(VI) to the air and wastewater. The programme shall include measurements which shall:
  - (a) take place at least annually, or more frequently if a significant increase of chromium trioxide consumption takes place on site, and shall be sufficiently frequent to capture any potential increase in emission of Cr(VI);
  - (b) be based on relevant standard methodologies or protocols;

- (c) ensure a sufficiently low limit of quantification;
  - (d) be representative of the operational conditions and risk management measures used at the site where the authorised use takes place;
  - (e) be recorded so as to include contextual information associated with each set of measurements.
3. The authorisation holder shall use the information gathered by way of the measurements referred to in paragraph 2 to review, at least annually, the appropriateness and effectiveness of the risk management measures and operational conditions in place. While doing so, the authorisation holder shall also review and, if needed, update its assessment of the exposure of the general population via the environment. If needed, based on the outcome of this review, the authorisation holder shall introduce measures to further reduce to a level as low as technically and practically possible Cr(VI) emissions to the environment.
4. The authorisation holder shall document and maintain the information from the monitoring programme referred to in paragraph 2, including the contextual information associated with each set of measurements, as well as the outcome and conclusions of the reviews and any measure taken in accordance with paragraph 3 and shall make that information available, upon request, to the competent authority of the Member State where the authorised use takes place.

#### *Article 5*

If a review report is submitted, it shall include the information referred to in Article 2(7) and Article 4(4).

#### *Article 6*

Upon request, the authorisation holder shall submit a brief summary of the applicable risk management measures and operational conditions described in the chemical safety report to the competent authority of the Member State where the authorised use takes place. The brief summary shall be drafted in an official language of that Member State.

*Article 7*
